

Techno-Contact Elite chosen to be Authorized Reseller of StarLine Busway Systems

Techno-Contact Elite is a market leader in designing and building Edge and Micro Data Centers.

Techno-Contact Elite is constantly on the look-out for new, innovative and reliable product solutions that meet the demand for efficiency and reliability as well as the requirement of shorter project delivery times and ROI. Techno-Contact Elite has recently been signed by Universal Electric as an authorised reseller of its StarLine Busway product line.

The StarLine offering includes:

- **Track Busway** is a revolutionary, overhead power distribution system that is available in various sizes and capacities from 40 to 1200 amps. The system's most unique feature includes a continuous access slot, meaning power can be tapped at any location.
- **Raceway** incorporates the concept of flexibility in a wall-mounted power distribution system.
- **Critical Power Monitoring (CPM)** combines revenue-grade metering accuracy with the flexibility to choose how information is communicated.

“StarLine Busway was a natural evolution for our Edge Data Center designs which are all about achieving ultra fast deployment times by using off the shelf pre-configured products. We have a lot of large colo data center build out projects going on right now in Montreal. Using StarLine to power the racks reduces both installation time and cost.”

– Jesse Singfield, Chief Solutionist

Techno-Contact Elite is a division of the Techno-Contact Group

Techno-Contact Group designs, adapts, and integrates products and solutions to ensure the reliability and availability of your data center while maximizing the efficiency of your installations. Our powerful design and quotation tools allow us to inform you of your different technology options and their impact on CAPEX and OPEX of your data center projects. By sourcing your equipment through Techno-Contact, you benefit from a full commitment of our resources, from the very beginning of your project. We specialize in high availability applications, therefore we are able to offer the best customized solutions.
